

# Online Safety Home Audit

This worksheet will guide you through your home, getting a handle on the “big picture” of all the pieces of your digital setup. Before you can make positive changes towards a safer online environment for your family, you’ve got to know what you’ve got already!

## Step One: Inventory

~List every device in your home that can connect to the Internet. (Don’t forget handheld and worn devices, gaming systems, and all tablets, laptops, and phones.)

~Indicate what filters, controls, or software programs are already protecting these devices, if you know. (Don’t worry too much about the second column; that’s what we’ll tackle next.)

Device	Protections in place already
Internet Provider:	
Cellular Provider:	
Router:	

Look at the list above. Which devices concern you the most? (Hint: these are probably the ones you’ll set up first.)

Which devices are you not concerned about much or at all?

## Step Two: Priorities

Start by filling in the vertical columns with your home's devices.

- The **first** column should be your Internet Service Provider
- The **second** column should be your Cellular Provider (Verizon, AT&T, Sprint, etc.)
- The **third** column should be your router (brand and model, if possible.)
- After that, list the devices from your inventory in Step One. You may consolidate like devices (ex. If all your children have iPads, list these as one "Kids' iPads", as you'll probably set them up the same way.)

Look at the list of parental controls below. Work through each control and put a circle for each device that are *capable* of controlling that issue (○). Also indicate with a check in the circle which ones are *already set up* on that device (✓). (Feel free to add your own controls if there is something missing here. You may also cross off any that are not important to you and your family.)

Device ⇨										
Control/Feature ⇩										
Filtering porn and harmful content										
Force Restricted Mode (YouTube)										
Force Safesearch (Google)										
Time limits (amount of time)										
Time limits (time of day)										
Monitors Social Media										
Monitors texts or iMessages										
Malware and virus protection
